

ScriptX and IE8

PTS uses the Mead Control ScriptX to handle printing. ScriptX has long provided control over printing in Internet Explorer, and this continues with Internet Explorer 8. With each major release of Internet Explorer there has been a new - and always fully backwards-compatible - release of ScriptX in order to maintain compatibility and to provide additional features.

This release is no different - ScriptX v6.5 or later is **required** when working with IE8 on Windows XP, Windows Vista and Windows 7, so both publishers - licensed, and free - and individual users will have to update.

Publishers' update

For your ScriptX-enabled content to work with IE8 it is **mandatory** that - if you are working with any earlier build of ScriptX - you now update to the new version 6,5,439,12 of the ScriptX binaries.

Note: ScriptX v6.4 and later no longer support Windows 9x/NT. For maintenance support of these operating systems.

The next time you log into the PTS you may see the following message. PLEASE CLICK Install.

If you click [Don't install](#) or your browser settings don't allow it to be installed then please follow the directions on the link provided here:
